
Pacemaker Python API

Release 3.0.0

the Pacemaker project contributors

Jan 09, 2025

CONTENTS

- 1 API** **3**
- 1.1 pacemaker 3
- 1.2 pacemaker.buildoptions 3
- 1.3 pacemaker.exitstatus 5

- Python Module Index** **7**

- Index** **9**

The APIs are documented here in submodules, but each submodule class is included at the top level, so code should import directly from the `pacemaker` module. For example, use `from pacemaker import BuildOptions`, not `from pacemaker.buildoptions import BuildOptions`.

<i>pacemaker</i>	API reference documentation for the <i>pacemaker</i> package.
<i>pacemaker.buildoptions</i>	A module providing information on build-time configuration of pacemaker.
<i>pacemaker.exitstatus</i>	A module providing constants relating to why a process or function exited.

1.1 pacemaker

API reference documentation for the *pacemaker* package.

1.2 pacemaker.buildoptions

A module providing information on build-time configuration of pacemaker.

Classes

<i>BuildOptions</i>	Variables generated as part of the <code>./configure && make</code> process.
---------------------	--

1.2.1 pacemaker.buildoptions.BuildOptions

class `pacemaker.buildoptions.BuildOptions`

Bases: `object`

Variables generated as part of the `./configure && make` process.

These affect how pacemaker was configured and where its various parts get installed.

__init__()

Initialize self. See `help(type(self))` for accurate signature.

Attributes

<i>BASH_PATH</i>	Path to the bash shell.
<i>CIB_DIR</i>	Where CIB files are stored.
<i>CIB_SCHEMA_VERSION</i>	Latest supported CIB schema version number.
<i>COROSYNC_CONFIG_FILE</i>	Path to the corosync config file.
<i>DAEMON_DIR</i>	Where Pacemaker daemons are installed.
<i>DAEMON_USER</i>	User to run Pacemaker daemons as.
<i>DATA_DIR</i>	Where read-only architecture-independent data is stored.
<i>INIT_DIR</i>	Where LSB init scripts are stored.
<i>LIBEXEC_DIR</i>	Where programs started by other programs are stored.
<i>LOCAL_STATE_DIR</i>	Where miscellaneous temporary state files are stored.
<i>LOG_DIR</i>	Where Pacemaker log files are stored.
<i>OCF_RA_INSTALL_DIR</i>	Where resource agents are installed.
<i>OCF_ROOT_DIR</i>	Root directory for OCF resource agents and libraries.
<i>PACEMAKER_CONFIG_DIR</i>	Where configuration files such as authkey are kept.
<i>REMOTE_ENABLED</i>	True if Pacemaker Remote support is enabled.
<i>RSC_TMP_DIR</i>	Where resource agents should keep state files.
<i>RUNTIME_STATE_DIR</i>	Where runtime data is stored.
<i>SBIN_DIR</i>	Where administrative programs are installed.
<i>SCHEMA_DIR</i>	Where Relax-NG schema files are stored.
<i>UNIT_DIR</i>	Where system-wide systemd unit files are stored.
<i>XMLLINT_PATH</i>	Path to the xmllint program.

BASH_PATH = '/usr/bin/bash'
Path to the bash shell.

CIB_DIR = '/var/lib/pacemaker/cib'
Where CIB files are stored.

CIB_SCHEMA_VERSION = '4.0'
Latest supported CIB schema version number.

COROSYNC_CONFIG_FILE = '/etc/corosync/corosync.conf'
Path to the corosync config file.

DAEMON_DIR = '/usr/libexec/pacemaker'
Where Pacemaker daemons are installed.

DAEMON_USER = 'hacluster'
User to run Pacemaker daemons as.

DATA_DIR = '/usr/share'
Where read-only architecture-independent data is stored.

INIT_DIR = '/etc/init.d'
Where LSB init scripts are stored.

LIBEXEC_DIR = '/usr/libexec'
Where programs started by other programs are stored.

LOCAL_STATE_DIR = '/var'
Where miscellaneous temporary state files are stored.

`LOG_DIR = '/var/log/pacemaker'`
Where Pacemaker log files are stored.

`OCF_RA_INSTALL_DIR = '/usr/lib/ocf/resource.d'`
Where resource agents are installed.

`OCF_ROOT_DIR = '/usr/lib/ocf'`
Root directory for OCF resource agents and libraries.

`PACEMAKER_CONFIG_DIR = '/etc/pacemaker'`
Where configuration files such as authkey are kept.

`REMOTE_ENABLED = True`
True if Pacemaker Remote support is enabled.

`RSC_TMP_DIR = '/run/resource-agents'`
Where resource agents should keep state files.

`RUNTIME_STATE_DIR = '/run'`
Where runtime data is stored.

`SBIN_DIR = '/usr/sbin'`
Where administrative programs are installed.

`SCHEMA_DIR = '/usr/share/pacemaker'`
Where Relax-NG schema files are stored.

`UNIT_DIR = '/usr/lib/systemd/system'`
Where system-wide systemd unit files are stored.

`XMLLINT_PATH = '/usr/bin/xmllint'`
Path to the xmllint program.

1.3 pacemaker.exitstatus

A module providing constants relating to why a process or function exited.

Classes

<i>ExitStatus</i>	Exit status codes for a function or process.
-------------------	--

1.3.1 pacemaker.exitstatus.ExitStatus

`class pacemaker.exitstatus.ExitStatus`

Bases: `enum.IntEnum`

Exit status codes for a function or process.

These constants describe both success and failure conditions.

`__init__()`

Initialize self. See `help(type(self))` for accurate signature.
